

EPOS

# EPOS BrainAdapt™

Enhance hybrid working with audio that's optimised for how we process sound

Sounds that can't be recognised in hybrid meetings are perceived as noise.

Noise is responsible for stressing the brain, using unnecessary energy, and causing fatigue.

Audio solutions built on EPOS BrainAdapt™ provide exceptional clarity and optimised conditions for the brain.

# EPOS passive noise damping

35%

less listening effort when  
in noisy environments\*

20%

greater word recognition for  
users in noisy environments\*

10%

better memory recall after  
important conversations\*

Hybrid working has transformed today's workplace, but there are still challenges to overcome. Dropped signals, poor audio quality, and background distractions can all lead to worker fatigue in and out of hybrid meetings.

EPOS BrainAdapt™ has been developed through decades of psychoacoustic research from the Demant Group. At every moment, the technology generates high-fidelity sound that's optimised for a user's brain. It's why EPOS solutions built on BrainAdapt™ are proven to improve cognitive performance and focus whether workers are at home, in the office, or somewhere in between.
