

Windows 11 Readiness Assessment Service

Highlights

Simplify — your migration plan.

Enable — expertise in planning, testing and deployment.

Enhance — customised output clearly showing route to readiness.

Empower — employee experience maintained throughout.

Introduction

Considering 35% of devices are not fully compatible with Windows 11, when do you plan to assess your readiness for the upgrade?

Windows 11 is Microsoft's newest OS, with many features and improvements for productivity, security, and hybrid working. But upgrading to Windows 11 also has challenges and risks, such as compatibility issues, application testing, and migration planning. How can you ensure your organisation is Windows 11 ready?

Many organisations have already adapted for the future by:

- Performing compatibility checks across the entire physical device estate.
- Ensure business applications are not impacted by adoption.
- Identify User, Device, Departmental and Geographical Readiness.

Methodology

Windows 11 Readiness service enables your IT team to understand their device and application landscape ahead of a migration, combining Microsoft and industry best practice. The output of the service provides data metrics to understand the most appropriate Windows 11 migration path.

▶ Hardware Compatibility

Analysis of estate hardware to identify devices that are compatible with Windows 11.

▶ Application Readiness

Intelligent automated Smoke Testing of business applications against target Windows 11.

▶ Windows 11 Insights

Gain Windows 11 insights to enable clear recommendations for Windows 11 adoption.
