

Active Directory (AD) Assessment Service

Highlights

Comprehensive report on current AD environment, including profile numbers, rights, and associated threats.

Recommendations enhancing security through rights adjustments, profile optimisation, and vulnerability remediation.

Introduction

With 95M daily AD attack attempts from both external and internal sources, including issues such as misconfigured policies and access, how is your organisation proactively addressing these challenges?

The Active Directory (AD) Assessment is designed to help you understand the risks – it's been configured to identify areas of weakness, and how vulnerabilities raised can be mitigated to strengthen your Active Directory configuration.

Pending the results of your assessment, we will review users' membership and rights on your internal network to highlight any potential security threats, so you can take back control and remediate accordingly and proactively.

Methodology

The assessment will help you understand the current state of your AD configuration, identify the potential risks and vulnerabilities, and provide you with actionable recommendations and best practices to improve your AD security posture and performance.

▶ Discover

The purpose of the initial workshop is to understand the business context, including:

- General threats associated with current AD build
- Number of profiles, Administration rights across profiles
- Network rights across profiles, Analyse profiles to job roles

▶ Define

During subsequent workshop(s) our specialists will work with you to:

- Analyse your AD build with our specialist tools and knowledge.
- Find and assess the AD security gaps and risks.
- Prioritise areas that pose the greatest risk to your AD.

▶ Recommend

The output of this activity is a concise roadmap that includes:

- Admin rights changes against profiles
- Network access rights changes across profiles
- Recommend optimisation of profiles
- Areas for remediation against threats
